Lash and brow enhancement techniques have never been so popular and this course is ideal for the complete beginner or qualified therapist wishing to update their skills.

What is Lash Lift?
The Lashlift technique is a simple safe and effective treatment that gives a natural curl or lift that lasts up to 8 weeks.

How does it differ from a standard Lash Perm?
The perm system used a rod to curl but this system uses a silicone pad, lifting each lash individually, adding an appearance of volume as well as lift & curl to your eyelashes. You can also choose the size of curl you require — small, medium or large.

Course Criteria
- Client consultation, contra-indications and client care
- Lashlift treatment procedure
- Benefits of treatment
- Differences between Lash Lifting & Lash Perming
- Practical application of treatment on models provided for you
- Costings & timings
- Troubleshooting, promotion and marketing of your new skill
