Psychiatric conditions

Wound care

Common eye, ear and nose conditions

# About Medipro

Established in 2007 Medipro training is a Teesside based company delivering pre-hospital health care, as well as health and safety training to a wide range of businesses. Including public services, private sector and individuals.

Medipro prides itself on the quality of staff that deliver their courses. Coming from a variety of professional backgrounds they include, doctors, nurses, paramedics and offshore medics, who have clinical expertise to enhance the value of the learning experience.

# About the course

The offshore installations and pipeline works (first aid) regulations 1989 placed a duty on those in control of offshore installations, pipeline works, or any associated activities to make provision for persons to administer first aid and emergency treatment to those who become ill or injured at work. This is a UK Health and Safety Executive approved course which encompasses all aspects of the legal requirements, alongside the latest clinical thinking.

The course contains a number of subjects designed to deal with the most common injuries and illnesses treated by offshore medics, along with severe medical emergencies.

- Subjects include but not limited to:
- History taking and clinical examination
  - Advanced/basic life support
  - Wound care
  - Common eye, ear and nose conditions
  - Pharmacology and drug therapy
  - CIEH food hygiene
  - Trauma management
  - Invasive techniques (intubation, IV access, catheterisation)
  - Hyperbaric medicine
  - MI and ECG recognition
  - Psychiatric conditions

# Course structure

The initial offshore medic course is a four week modular programme. This allows our students to complete the course in four consecutive weeks or four individual weeks over a 12 month period. The first and second weeks are classroom based theory and practical, the remaining two weeks are placement and examination. Refreshers are a two weeks classroom based course, which can be completed modular or distance learning over a six month period.

# Examinations

Examinations consist of multi choice, written and practical assessments, which are conducted by experienced clinicians. On successful completion a certificate is awarded which is valid for three years.

# Placements

Medipro can facilitate the placement element of the course, which is a minimum of eight days. These can include attachments to primary care services, GP surgeries, A&E departments and ambulance services. The students are given competency booklets with specific objectives which form an overall part of the course achievement.

Medipro understands that many of our students already come from a medical background, and because of this will be more comfortable arranging their own placement in a practice that they are currently employed with (subject to suitability). In these instances the cost of the course will be reduced.

# Who can apply

The HSE state that before commencing this course a student should have prior medical knowledge, medipro accept students who are:

- RGN and EN nurses who appear on the UKCC register
- HPC Paramedics
- MOD medics

This list is not exhaustive, and medipro will assess potential students from varying experience on an individual basis, please contact for further information.

# Costs

Medipro are the only provider able to offer the full package you require to work offshore as a medic. Our unique partnership with Falck Nutec enables us to offer the required medical and the 3 day Offshore Survival course.

|                                                                                             |          |
|---------------------------------------------------------------------------------------------|----------|
| HSE Offshore Medic 4 week (including Medipro arranged placement)                            | £1950.00 |
