

Virtigo Virtualisation Training

Uniquely tailored Virtualisation Training

Because Virtualisation is rapidly evolving it's vital that successful businesses keep up to date with this advancing technology and its awesome ability to reduce IT costs, increase flexibility and transform business efficiency.

We're passionate about this area of IT and our in depth knowledge and expertise in Virtualisation applications continues to help businesses across the UK get the best from this innovative toolset.

We take the time to understand your unique business needs so we can design, deliver and support cutting edge virtualisation training that will enhance the use of your chosen application across all business functions. Our training courses are uniquely tailored to match your exact business and budget requirements.

Virtualisation training opportunities

Our training is available for UK based IT professionals and we provide:

- App-V Sequencing Courses
- Weekend Application Virtualisation Training for IT Contractors
- App-V Public Sequencing Courses

App-V Onsite Sequencing Courses

Training is delivered by expert instructors who have years of hands-on experience working with Softgrid and Microsoft Application Visualization. With this training you'll soon learn all you need to know, including Microsoft App-V Best Practices.

We can deliver some courses on site so your employees are in familiar surroundings and can attend to any urgent business demands. You also save the cost of travel and subsistence that is often incurred in off-site training.

Our courses are customised to meet your exact business needs and to give you the best value for money. As your Virtigo trained staff optimise the true value of this toolset across your entire organisation, you'll soon realise a great return on investment.

App-V Public and Onsite Sequencing Training

Sequencing with App-V is one of the most challenging tasks of Virtualisation – it requires specific knowledge, skills and experience to fully master the process. It's a crucial step to using the toolset and essential for anyone aiming to become a successful App-V professional.

Our 2 day course, delivered at our brand new training centre or at your own premises gives all participants the best possible start in getting to grips with virtualisation sequencing.

All sequencing courses are delivered by highly skilled and experienced App-V professionals who know exactly how best to pass on their knowledge, offering invaluable tips and advice concerning all aspects of App-V Sequencing.

And because we uniquely tailor our courses to meet your exact needs, if you have any specific issues with sequencing, we make sure these are fully covered over the two days.

App-V Weekend Training for IT Contractors

We've been working with IT contractors for many years. In fact some of us used to be contractors so we know what it's like trying to keep your skills up to date and maintain an income at the same time.

Virtualisation is fast becoming a standard technology for use across the whole IT field and the demand for installation and maintenance of

Application Virtualisation is rapidly increasing. To meet demand, IT contractors need to have the right knowledge and skills to help businesses get the best from the toolset.

Our weekend course is the ideal solution. Now you can improve your skill-set and your potential to win new business.

Get in touch to find out more about our training courses, including course fees.
