Venue -	Birmingham Science Park - Aston²
Included -	Course Materials & Refreshments
Extra Services -	Additional Modules, Private Tuition³

Smart Energy & Environmental Training are proud to be supporting RETScreen® International. Our one day introductory workshop gives candidates an exciting insight into the capability of this FREE to download software. For those unfamiliar with the RETScreen name® it has been developed over the last 10 years + and is becoming widely regarded as the leading analytical software for renewable energy and energy efficient products and projects. It is a powerful, spreadsheet based software analysing multiple variables and factors pertaining to the technical, financial and environmental impacts or sustainable projects. RETScreen® is continually being developed and is partnered by widely recognised organisations such as NASA, UNEP and REEP. For more information and to download the software visit their website at www.retscreen.net

With the introduction of Feed in Tariffs and the upcoming Renewable Heat Incentives, renewable energy is no longer just the right thing to do for the environment; it is also the financially sensible thing to do. The workshop is aimed at anyone involved in or considering a renewable energy project, or the implementation of energy efficiency measures, both new and retrofit.

¹ RETScreen is a registered trademark of the Minister of Natural Resources Canada

² Courses are run monthly nationwide, please call for details of your local centre

³ 1 on 1 sessions available for additional learning, prices available on request

Workshop candidates will be those who are:-

- Assessing Sustainable Energies for large or small projects
