

Medical Gases

Medical Gases

DESCRIPTION

This course is a comprehensive programme based on the necessary theory to enable the correct use of medical gases. This is specifically designed to enable the use to safely and competently use oxygen and entonox appropriately. Although the medical gases course is predominantly theory there are practice elements too using the available gas units as well as your own on site equipment.

The Medical Gases course is designed to give users the confidence in their safe clinical use. It is ideal for staff working in medical centres, emergency services including police response units, voluntary organisations and private ambulance staff.

DURATION

1 Day

SYLLABUS

The course content includes the following:

- Oxygen theory (British Thoracic Society Guidelines)
- CO2 retainer patients
- Internal and external respiration
- Oxygen safety, storage, indicators and contra indicators
